Instructions

^ COLLAPSE ^

Preliminary Setup:

1. Go to w3schools.com
2. Create an account (preferably with your college account)
3. Visit my-learning.w3schools.com/tutorial/git
4. Complete the following readings:
 1. Essentials 1.1, 1.2, 1.3
 2. Essential Commands 2.1, 2.2, 2.3, 2.4
 3. Branch Management 3.1, 3.2
 4. Remote Collaboration 4.1-4.9
 5. Security Practices 6.1-6.3
 6. Attempt the Git Quiz (aim for $\leq 70\%$)
5. Verify you're in the main branch via ``git status`` or ``git branch``
6. If not, ``git checkout main``
7. Create a branch for this assignment ``git checkout -b M1-Git-Readings``
8. **Note:** In this assignment, we'll make the pull request later. In future assignments, we'll likely open it earlier so we can use the URL for assignments
9. Fill in the items in the worksheet below (save as often as necessary)
10. Once finished, export the worksheet
11. Take the exported file and add it anywhere in your repository (a Module1 folder is best, but not required)
12. Make sure git detects it by checking with ``git status``
13. If everything is good, continue to submit
 1. Track the file either with ``git add path/to/file`` or ``git add .``
 2. Commit changes via ``git commit -m "some relevant message"``

3. Push the changes via ``git push origin M1-Git-Readings``
14. Go to GitHub and use the dropdown in the top left to find the M1-Git-Readings branch and ensure the file is present
15. If the file is there, either use the pull request popup or go to the pull request tab and open a request where main is base and M1-Git-Readings is compare
16. Open and complete the merge of the pull request (it should turn purple)
17. Go to Canvas and upload the same PDF that you just downloaded and pushed to GitHub

Branch name: M1-Git-Readings

i Details:

Each prompt should have a few reasonable sentences.

Columns: 1

Sub-Task

Group: Github Readings
Task #2: Reflection
Sub Task #1: Mentions issues or no issues

≡ Task Response Prompt

Explain in concise steps how this logically works

Response:

Thanks to the instructions given, there wasn't really any complication. At first, it brought questions towards what needed to be done and if everything but it was resolved. The score for the test wasn't appearing for some reason but it was solved with a refresh.

Sub-Task

Group: Github Readings
Task #2: Reflection
Sub Task #2: Summarize core concepts related to the readings

≡ Task Response Prompt

Explain in concise steps how this logically works

Response:

This is quite a good review about Git for me because I've been using it since I took IT202 and I'm continuing to use it.

Git is simply a version control system where we are able to capture code/text/etc locally in our machine. Github is used in order to transfer those snippets towards a cloud like github so it can be access and collaborated with others. In terms of initializing a git repo, there's commands like git clone or git init. From we are able to create files using touch and if we'd want to to be tracked, we'd use "git add" and the specific file or "git add ." to add everything that's tracked. "Git status" in order to check what files are being tracked and which aren't. Once they're in the tracking stage, you can confirm it's commit by "git commit -m "Something"". It's important to have a message for each commit to know what was done or is being done. Using "git push origin branch-name", allows you to send the recent commits towards github/remotely. "Git pull ..." will retrieve the changes remotely back to the local.
